CE

401-D2 ROOM CONTROL UNIT

Mount Kelvin 401-D2 Room Control Unit (RCU) controls DALI and EnOcean devices in a guest room. RCU is a component assembled by Mount Kelvin and it must be always connected with a power supply unit and EnOcean antenna.

The room control unit works autonomously, but in order to monitor the system or change the configuration via cloud, it must be connected to a **401-D2 Master Unit**.
